Operations hub

Safety hub

Colour language

1. The Home Screen

Home is a branded landing page with four large buttons: **DrillTick Operations**, **DrillTick Safety**, **Contact Us** and **Quit**. It holds no records itself. A small footer shows the version, “Drill-Tick v1.0”.

Button	What it does
DrillTick Operations	Opens the drilling-operations hub
DrillTick Safety	Opens the safety hub
Contact Us	Shows an intro banner image with Gmail and LinkedIn buttons pinned to the bottom
Quit	Closes the app

2. The Operations Hub

Operations is organised like a department tree. Each level is a screen of large tiles with a breadcrumb line (for example “Operations › LWD / MWD › MWD & DD › Survey”) so you always know where you are.

Department	Status	What is inside
Drilling	Open	Well Control (built). Well Design, Drilling Operations and Drilling Tools show “coming soon”
LWD / MWD	Open	MWD & DD → MWD → Rig Sensor, Survey and Downlinking (built). LWD, Directional Drilling, Start a New Job and MPT show “coming soon”
Reservoir	Coming soon	Placeholder tile
Well Testing	Coming soon	Placeholder tile

Department	Status	What is inside
EOR	Coming soon	Placeholder tile

A “coming soon” tile opens a small popup naming the module, so the structure of the finished product is visible even though not every part is built yet.

3. The Safety Hub

Safety is arranged around a short list of areas. The detail of each is covered in its own document.

Area	Status	What is inside
Personal Safety	Coming soon	Placeholder tile
Process Safety	Open	Permit to Work, Well Control and Lifting Operations (built). Risk Assessment Report and HAZOP Report show “coming soon”
Report An Event	Open	Incident, near-miss and observation reporting
Safety Dashboard	Open	Charts and summaries built from submitted reports
HSE Periodic Reporting	Open	The Monthly Report is built. Daily and Weekly reports show “coming soon”
Checklists	Open	Seven safety and operational checklists

4. The Colour Language

Rather than decorate screens randomly, the app uses colour to carry meaning, so a user can judge a tile’s nature at a glance.

Colour	Meaning
Green	Primary, navigable, “go”
Cyan	Technical, data and measurement — LWD / MWD, sensors, SCR measurement
Amber	Operational drill-floor activity — planning and drilling work
Red	Critical or high-risk — Well Control
Slate grey	Coming soon, locked or unavailable

5. Design Principles

- **One look everywhere.** Every screen has the same header (a back button, a title, a subtitle and an icon), a breadcrumb line and the shared bottom bar.

- **Show the road ahead.** Planned modules appear as “coming soon” tiles rather than being hidden.
- **Field-friendly.** Dark backgrounds, large tiles and high-contrast text suit use on a rig, in poor light or with gloves.
