1. Choosing a Report Type

Report An Event is the single door into safety reporting. It shows three large cards, each with a tag that says how serious the report is:

Card	Tag	Use it when
Observations	Proactive	Reporting unsafe conditions or unsafe acts seen on site, or a positive safety behaviour
Incidents	Critical	An event in which injury, illness or asset damage occurred
Near Miss	Potential	An unplanned event that did not cause harm but could have

The Observations card leads to a second choice of three forms: **Safe Behaviour Observation**, **Unsafe Act Observation** and **Unsafe Condition Observation**.

2. The Form Pattern They Share

The forms are long, so each is a **guided stepper**: a section at a time, then a review page. The same pattern is used for incidents, near misses and the unsafe-act and unsafe-condition observations.

Step	Section	Purpose
1	Reporting details	Location or area, department, who reported it (or anonymous), date and time
2	Category	A grouped list of types. Pick one, or choose “Others” and type a description
3	Description	A one-line summary, an exact location, immediate actions taken and remarks

Step	Section	Purpose
4	Impact and risk	Impact areas, severity, likelihood, primary consequence and the risk meter
5	CAPA	Corrective and preventive actions, each with an owner, a target date and a status
6	Supervisor / reviewer	Review details, target date, action status and, for incidents and near misses, a root-cause analysis
Review	Review and submit	A summary of everything, then a confirmation before submitting

3. The Risk Meter

Severity and likelihood combine into a single score that is always visible, so the reporter sees the result as they choose.

Form	Severity scale	Likelihood scale	Score bands
Near Miss and Observations	Low, Medium, High (1 to 3)	Unlikely, Possible, Likely (1 to 3)	1–2 Low · 3–4 Medium · 6–9 High
Incident	Low, Medium, High, Critical (1 to 4)	Unlikely, Possible, Likely (1 to 3)	1–2 Low · 3–4 Medium · 6–8 High · 9–12 Critical

The score is **severity × likelihood**. Colours run green for Low, amber for Medium, red for High and purple for Critical.

4. Shared Behaviour

- **Dynamic consequence list.** The “primary consequence” options depend on which impact areas were ticked — People, Asset, Environment or Community — so only relevant choices appear.
- **Validation.** A section cannot be passed while required fields are empty, and the Review step lists what is missing.
- **Submit confirmation.** A final “Yes, submit” dialog guards against accidents.
- **Save and submit.** The report is added to the permanent log and the dashboard reloads.
- **View and edit.** Opening a record from the dashboard loads the saved form and jumps straight to the review step, where it can be edited and updated in place.
- **Export PDF.** The report can be exported and shared without being saved, which is useful for a quick copy.
- **Inline pickers.** Dates and times open a calendar or an analog clock directly under the field. The clock can switch to a digital spinner.

Where the form was opened from — Report An Event or the dashboard register — decides where the back button leads after submitting.

5. Colour Language

Colour	Used for
Orange	Observations, routine and awareness
Amber	Near misses, “almost happened”
Red	Incidents, where harm occurred
Green	Safe observations, the positive side
