

Observations

Three forms for the proactive side of safety: safe behaviour, unsafe acts and unsafe conditions

⚠ FOR UNDERSTANDING PURPOSES ONLY

Safe behaviour

Unsafe act

Unsafe condition

Recognition

1. What They Are

Observations are the **proactive** side of safety reporting — spotting something before it causes harm, or recognising someone doing the right thing. They are reached from Report An Event › Observations and come in three forms.

Form	Tag	Purpose
Safe Behaviour Observation	Positive	Record a positive behaviour or safe condition seen on site
Unsafe Act Observation	Behavioural	Record something a person did that was unsafe
Unsafe Condition Observation	—	Record a hazard in the environment, equipment or workplace

2. Unsafe Act Observation

Six sections, then review, using the shared stepper pattern.

Section	What you enter
1. Reporting details	Location, department, who observed it (or anonymous), date and time
2. Unsafe act category	A grouped list: PPE violations (failure to use, improper use, damaged or incorrect PPE), unsafe use of tools and equipment , unsafe lifting technique , unsafe ladder practices , housekeeping violations , vehicle and driving unsafe acts such as unsafe reversing, and others
3. Observation description	A one-line summary and immediate actions, for example work stopped or PPE provided or corrected

Section	What you enter
4. Impact & risk	Impact areas, severity, likelihood, primary consequence and the risk meter
5. CAPA	Corrective and preventive actions
6. Supervisor / reviewer	Review details and a target completion date derived from the observation date and the risk level

3. Unsafe Condition Observation

The same six sections. The category list is about the workplace and equipment:

Group	Examples
Housekeeping & work area	Poor housekeeping, obstructed walkways, improper storage or stacking, oil spill or slippery surface
Physical hazards	Slip or trip hazard, dropped object, sharp edges, unguarded openings
Equipment & machinery	Defective tools, missing machine guards, equipment malfunction, poor maintenance
Electrical hazards	Exposed live wires, damaged cables, overloaded circuits, improper grounding
Work at height / structural	Unsafe scaffolding, unstable structure, open pit or unguarded edge

4. Safe Behaviour Observation

A shorter, positive form with different sections:

1. **Reporting details.**
2. **Safe behaviour category.** Examples include PPE compliance (correct use, appropriate selection, PPE in good condition), working conditions followed as per permit, housekeeping excellence and equipment in good condition.
3. **Observation description.**
4. **Leadership and behavioural attributes.**
5. **Recognition.** The observer can recommend the person for **appreciation**, with their name or ID.

There is no risk meter or corrective-action table, since nothing needs fixing.

5. Where They Go

All three observation types are stored in one log, tagged as safe, unsafe act or unsafe condition. The Safety Dashboard's **Observations** tab and the Overview register read from it, and any record can be reopened in view or edit mode from there.
