1. What It Is

A monthly report of safety performance, titled “HSE Monthly — Safety Performance Report”. It is reached from Safety › HSE Periodic Reporting › Monthly Report. (The Daily and Weekly reports are shown as “coming soon”.) It can be saved to one of three named slots and exported as a PDF.

2. Report Information

The header block holds the **report month and year**, **report number**, **work order number**, **actual work start date** (a calendar picker), **name of the contractor**, **nature of work / asset ID** and **reporting department**. The month list runs January to December, and the year list runs from 2015 to five years beyond the current year.

3. The Four Sections

Section	What it holds
A. Safety statistics	A table with Previous , This Month and Cumulative columns: average staff and workmen, man-hours worked, lost time accidents (LTA), man-days lost, medical treatment cases, first aid cases, near-miss incidents, fire (major and minor) and LTA-free man-hours. Frequency and severity rates sit at the end
B. Training / awareness	Eight rows: staff and workers in safety induction training, helpers trained, toolbox meetings, HSE meetings, awareness programmes, incentives or awards given and penalties imposed
C. Inspection / audits	A list of the month's inspections: date, topic, observations and status (open or closed). It starts with three rows and can grow to ten
D. Violation details	Counts of normal and high-potential violations raised by the contractor and by the client, plus a remarks box

4. The Automatic Calculations

Value	How it is worked out
Man-hours this month	Hours per day × average staff × working days in the month. Working days = days in the month × days per week ÷ 7, rounded
Previous and cumulative	The cumulative column fills itself in; where a previous or cumulative value is left at zero, it is derived from the other columns
Frequency rate	$LTI \times 1,000,000 \div \text{man-hours}$
Severity rate	$\text{Man-days lost} \times 1,000,000 \div \text{man-hours}$

5. Saving and Exporting

- **Save Report** opens a slot picker with three numbered slots. Choose a slot and give it a name; the default is the report month and year. Empty slots are marked.
- **Open** loads a saved report back into every field.
- **Export PDF** builds an A4 report with the same four sections and shares it.

Saved monthly reports are kept in the app database alongside the other reporting data.
