

Checklists — Part 1

Safety Orientation, Pre-Spud, Drops and the SIMOPS Programme

⚠ FOR UNDERSTANDING PURPOSES ONLY

Orientation	Pre-Spud	Drops	SIMOPS
-------------	----------	-------	--------

1. The Checklists Menu

Reached from Safety › Checklists, the menu lists **seven checklists** as wide cards, each with its own colour and icon. This guide covers the first four; the other three are in Part 2.

Checklist	Colour	In this part
Safety Orientation Checklists	Green	Yes
Pre-Spud Check List	Orange	Yes
Drops Checklist	Red	Yes
Simops Programme	Teal	Yes
Safety Inspection / Audit Checklist	Amber	Part 2
Mast & Sub-Structure Inspection	Purple	Part 2
Contractor Safety Inspection / Audit	Blue	Part 2

2. What the Forms Have in Common

- **Single-tap status.** Tap a row to cycle its status — for example N/A, then Yes, then No — instead of opening a drop-down.
- **Inline calendar.** The date field opens a calendar right under it.
- **Export PDF.** A button at the top builds an A4 PDF of the filled-in checklist and shares it. While it is working, the button shows “Generating...”.
- **Custom rows.** Where a checklist cannot cover every site, an “Add custom row” button adds your own item to a section.
- **Header fields.** Company, site, location or supervisor details are filled in at the top and appear on the PDF.

3. Safety Orientation Checklist

A record that a new person has been briefed on the rig's safety arrangements. It is titled "Orientation by IM / Tool Pusher / Safety Officer".

- **Status cycle:** N/A → Yes → No → N/A.
- **Twenty-one topics**, from general safety rules, alarms and assembly points, PPE, permits to work and incident reporting, to fire equipment, hazards of cluster or flowing wells, zone classification, first aid, prohibitory signs, environment protection, the drugs, alcohol and weapons policy, work-specific hazards, rules and procedures, housekeeping and personal hygiene.
- **Header:** site or location, department, trainee name and designation.
- **Reminders on the page:** the five key commitments, an emergency contact block (rig control room, medic or doctor, fire and rescue, nearest hospital), and "If in doubt — stop and ask".
- **Sign-off:** trainee name (filled in automatically) and the supervisor or trainer's signature.

4. Pre-Spud Check List

A readiness check for **onshore drilling rigs** before spudding, in three parts. Many lines cite the regulation they relate to.

Part	Examples of what is checked
A. Drilling	Contingency plan for fire and blowout displayed, HSE policy displayed, emergency response plan available, SOPs on site, crew PPE, fire-fighting equipment, breathing apparatus, safety harness with lifeline, gas detectors, ladders, casing line, handling tools, floor-o-matic and crown-o-matic devices, emergency escape device, trip tank, BOP control system, high-pressure line testing, dropped-object survey, first aid and SIMOPS procedure
B. Mechanical & electrical	Power pack engines, mud pumps, compressor, generators, brakes, solids control, relief lines, guards on moving parts, auto shut-off, pressure vessels, spark arresters, communications, earthing, illumination, electrical line diagram, emergency light, aviation light and CCTV
C. Civil	Hardening and rolling of the site, approach road, parking areas, waste pit lining, fire water tank capacity, chemical storerooms, drinking water, toilets and septic tanks, drainage, fencing and gates, and a sand cushion at the escape-device landing points

- **Four-state status:** N/A → OK → Not OK → EDC, where EDC items carry their own date field.
- **Progress bar** at the top and running counts of items by status.
- **Custom rows** can be added at the end of each of the three parts.

5. Drops Checklist

The **Dropped Object Prevention scheme**: a structured walk-round of the derrick to confirm that nothing overhead can fall. It has a “golden rule” banner and two statuses, **Yes / Good** and **No / Poor**, plus N/A.

Section	What is checked
A. Crown	Fast-line and main sheave clusters bolted, rope guides, aircraft warning light, drill-line guard, snatch blocks secured, crown saver clamped and covered
B. Monkey board	Diving board chained, handrails double-bolted, toe plates all round, drill-pipe securing chains pinned
C. Derrick — off-driller side	Standpipe clamps, winch-line hanging assembly, Geronimo line plates, goose-neck plate with locknuts
D. Derrick — driller side	Standpipe saddle clamp, bulbs and junction boxes secured with safety wire
E. Derrick — front side	Travelling block track rollers and sheave guards, pipe-spinner support, clamps beneath the crown
F. Derrick — back side	Kelly hose and rotary hose chained and secured. Labelled as a high dropped-object risk zone
G. Miscellaneous	Locknut-type bolts or wire pins, drift pins and safety pins on the substructure, rig-floor toe plates

6. SIMOPS Programme

SIMOPS means **simultaneous operations**: different jobs happening near each other at the same time, such as drilling beside crane lifts or hot work. The screen has three tabs.

Tab	What it is
Delegation	A one-page Delegation of Authority letter with company address, letter number and date, listing the roles involved: SIMOPS coordinator, OIM or toolpusher, company man or DSV, drilling supervisor, HSE officer, operations supervisor and third-party supervisor. The page is laid out at a fixed width and scaled to fit any screen
Checklist	Six groups of yes/no questions: planning and identification, communication and coordination, hazard controls, well-control interface, personnel and emergency response, and sign-off and monitoring. There is also an onshore checklist with a procedures section that expands
Matrix	The SIMOPS matrix, after the OISD-GDN-186 annexure

The SIMOPS Matrix

A grid of about twenty-five operations (rig skidding, drilling, tripping, well kill, cementing, BOP testing, hot work, crane lifts, wireline, perforation, confined space entry, emergency drill and so on) against each other. Each cell is set to one of three values:

Code	Meaning
NP	Not permitted together
P	Permitted together
PPA	Permitted with prior approval

- The matrix is **editable**: row and column headings can be renamed, and header text can be rotated 90° either way.
- **Undo and redo** step through earlier versions of the grid.
- **Five save slots** in the database store the matrix with a label and time.
- The sticky layout keeps headings in view while scrolling.
